THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

- Applicant's response was received September 2, 2008.
- Claims 9-18, 25 and 27 are allowed.
- Claim objections, claim rejection under 101 (non-statutory subject matter), and 112, 2nd paragraph are withdrawn in light of amendments.

REASONS FOR ALLOWANCE

1. Claims **9-18, 25 and 27** are allowed. The following is an Examiner's statement of reasons for allowance:

Independent **claim 9** of the present application teaches, for example, a method for measuring timing properties of at least one input/output circuit of an integrated device comprising pulling in a strobe edge in predetermined decrements up to a single phase of a clock inverting the clock signal after the strobe edge has been pulled in by at least the single phase of the clock signal; holding the strobe edge constant L after the strobe edge has been pulled in by at least the single phase of the clock signal while pushing a data out in predetermined increments; strobing the data with the strobe edge; measuring a setup parameter of the input/output circuit, and by pulling determining whether a failure condition exists for the input/output circuit based on the measured setup parameter.

The foregoing limitations are not found in the prior arts of record. Particularly, none of the prior arts of record teach nor fairly suggest, *"pulling in a strobe edge in predetermined decrements up to a single phase of a clock inverting the clock signal after the strobe edge has*

been pulled in by at least the single phase of the clock signal; holding the strobe edge constant L after the strobe edge has been pulled in by at least the single phase of the clock signal while pushing a data out in predetermined increments; strobing the data with the strobe edge; measuring a setup parameter of the input/output circuit', and by pulling determining whether a failure condition exists for the input/output circuit based on the measured setup parameter''.

Consequently, claim 1 is allowed over the prior art.

Dependent claims **10-13** depend from allowable independent claim and inherently include limitations therein and therefore are allowed as well.

As per claim 14:

Independent **claim 14** of the present application teaches, for example, A method for measuring timing properties of at least one input/output circuit of an integrated device comprising: pulling in a strobe edge in predetermined decrements up to a single phase of a clock inverting the clock signal after the strobe edge has been pulled in by at least the single phase of the clock signal; holding the strobe edge constant L after the strobe edge has been pulled in by at least the single phase of the clock signal while pushing data out in predetermined increments strobing the data with the strobe edge; measuring a hold parameter of the input/output circuit and determining whether a failure condition exists for the input/output circuit based on the measured hold parameter.

The foregoing limitations are not found in the prior arts of record. Particularly, none of the prior arts of record teach nor fairly suggest, *“one input/output circuit of an integrated device comprising: pulling in a strobe edge in predetermined decrements up to a single phase of a clock inverting the clock signal after the strobe edge has been pulled in by at*

least the single phase of the clock signal; holding the strobe edge constant L after the strobe edge has been pulled in by at least the single phase of the clock signal while pushing data out in predetermined increments strobing the data with the strobe edge; measuring a hold parameter of the input/output circuit and determining whether a failure condition exists for the input/output circuit based on the measured hold parameter". Consequently, claim 11 is allowed over the prior art.

Dependent claims **15-18** depend from allowable independent claim and inherently include limitations therein and therefore are allowed as well.

As per claim 25:

Independent **claim 25** of the present application teaches, for example, An apparatus comprising: a plurality of input/output circuits to be tested by a central control loopback test that: strobes a data with a strobe edge; and measures a setup parameter for at least one input/output circuit by pulling in the strobe edge in predetermined decrements up to a single phase of a clock signal; the apparatus to invert the clock signal after the strobe edge has been pulled in by at least the single phase of the clock signal; and hold the strobe edge constant, after the strobe edge has been pulled in by at least the single phase of the clock signal, while pushing the data out in predetermined increments.

The foregoing limitations are not found in the prior arts of record. Particularly, none of the prior arts of record teach nor fairly suggest, *"a plurality of input/output circuits to be tested by a central control loopback test that: strobes a data with a strobe edge; and measures a setup parameter for at least one input/output circuit by pulling in the strobe edge in*

predetermined decrements up to a single phase of a clock signal; the apparatus to invert the clock signal after the strobe edge has been pulled in by at least the single phase of the clock signal; and hold the strobe edge constant, after the strobe edge has been pulled in by at least the single phase of the clock signal, while pushing the data out in predetermined increments”.

Consequently, claim 25 is allowed over the prior art.

Dependent claim **27** depends from allowable independent claim and inherently includes limitations therein and therefore is allowed as well.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
